Abstract

Well-being is an important aspect of life. It comes with two perspectives; subjective well-being which is concerned with how happy you are in your life, whereas psychological well-being is concerned with how satisfied you are with your life. The concept of psychological well-being looks argues that well-being is not just about being happy, it is about living a life which is worth living. Ryff came up with six facets of psychological well-being; autonomy, personal growth, self-acceptance, life purpose, mastery, and positive relations. These factors are positively related to personal and professional success. We will explore the same in this study.

Purpose: This research is undertaken to understand the eudaimonic perspective of well-being. A sample of management students is studied in Ryff's model of psychological well-being and its 6 aspects.

Methodology: A literature review was done to understand psychological well-being and its facets. Then a primary study was conducted to understand these facts in the given sample. In all, 295 students were studied on Ryff's well-being scale and results were analyzed through descriptive as well as inferential statistical analysis.

Results: The results showed higher levels of psychological well-being in management students. Personal growth perceived is high. Also the data is negatively skewed for all aspects and also for the overall wellbeing score.

Keywords: Psychological well-being, Eudaimonic Well-being, Ryff's scale, Management students
